

IBM® Cognos® Health Check

PerformanceG2's Cognos Health Check service can help your organization efficiently review the current health and maturity of your IBM Cognos environment, ensuring that you have the most up-to-date Cognos system that conforms to best practices and industry standards.

Health Check Offerings

Our comprehensive assessment of your organization's entire Cognos software architecture is executed by our team of experienced and certified technical specialists, who will review your entire configuration and provide a detailed summary that includes recommendations to enhance your environment.

PerformanceG2's Health Check service includes:

- Cognos Architecture Validation- provides visual diagrams of your Cognos architecture, both physical and logical
- System Overview- general diagnostic of complete Cognos system, shows patches and FP's that may be required
- Cognos Content Store Diagnostic- scans the content store for corruption or clean-up issues and sizing issues
- Cognos Compliancy Diagnostic- ensures that all software and hardware are compliant with Cognos products
- Cognos Framework Manager Diagnostic- checks the Framework Manager model to ensure best practices are being followed
- Cognos Report Diagnostic- checks for broken reports and ownership issues, and provides fix suggestions
- Cognos Dispatcher Diagnostic- checks for inconsistencies with dispatcher settings
- Cognos Connection Diagnostic- identifies broken links, orphans and provides fixes
- Cognos User and Group Diagnostic- provides information on users and groups, allows transfer of non-existent user content to administrator
